

Metcon WebAlert® Monitoring

Do you find it difficult, frustrating and time consuming to gather the data from your different instruments?

WebAlert® seamlessly web-enables your installed equipment, providing local and remote access to vital system information, without the need to physically visit remote sites. WebAlert® monitors and datalogs both analog and digital inputs from virtually any installed device.

With the Metcon WebAlert® Monitoring package, operations staff will be instantly notified of any system abnormalities through e-mail, cell phone text message and/or pager. For a low monthly monitoring fee, Metcon will remotely monitor and collect data, allowing your operations to run smoothly and more efficient.

The Metcon WebAlert® Monitoring package includes:

- One WebAlert® unit which features integrated functions of both a data logger and auto dialer in one unit
- Remote monitoring of up to six (6) analog signals and six (6) discrete inputs
- Automatic e-mailing of Data files and status reports at requested intervals

Site requirements:

- WebAlert® unit installed
- Telephone line
- Broadband or Dial-up internet service
